

BCS Faculty of Health and Care

- BCS Faculty of Health & Care was created on 23 July 2024, replacing Health & Care Executive
- The BCS transition offer to FCI, said that BCS Faculties (multiple sectors) will be “larger and more autonomous structures for strategic communities”
- What does that mean in practice?

Faculty of Health and Care

- The BCS document enumerated that the Faculty remit would include:
 - Developing policy, in collaboration with FEDIP
 - Advocating professionalism
 - Providing strategic advice
 - Sharing market insight
 - Developing resources for the professional development of the whole digital team
 - Communities of practice established to develop good practice for health and care informatics
 - Developing research
 - Providing leadership for the profession

Other considerations

- How should we manage bids for paid work?
- How can we go further with cross-BCS collaboration, already happening with AI and Computable Biomedical Knowledge group?
- How can we “unleash” BCS organisational members – within and beyond health and care?
- How can we develop SIGs into communities of practice?
